AMENDMENTS TO THE CLAIMS

1. (CURRENTLY AMENDED) A cover film for organic electroluminescence devices which comprises polymers of decomposition products of a perfluoroolefin and has an average light transmittance of 70% or larger in a wavelength band of 400 to 800 nm, wherein said perfluoroolefin is at least one perfluoroolefin selected from the group consisting of:

(a) a linear or branched perfluoroolefin selected from the group consisting of perfluoropropene, perfluorobutene, perfluoropentene, perfluoro-2-methylbutene; and

(b) a perfluorocycloolefin selected from the group consisting of perfluoro-cyclopropene, perfluorocyclobutene, perfluorocycloheptene, perfluorocyclooctene, perfluoro-(1-methylcyclobutene), perfluoro(3-methylcyclobutene), perfluoro-(1-methylcyclopentene) and perfluoro(3-methylcyclopentene).

2. (ORIGINAL) A cover film for organic electroluminescence devices according to Claim 1, wherein the perfluoroolefin is a perfluorocycloolefin.

3. (CURRENTLY AMENDED) An organic electroluminescence device which comprises at least an electrode layer (an anode), a layer of a light emitting substance, a transparent electrode layer (a cathode) and a cover film for electroluminescence devices according to ~~described in~~ Claim 1, said layers and said film being laminated successively on a substrate.

4. (ORIGINAL) An organic electroluminescence device according to Claim 3, wherein light is emitted mainly at a side of the cathode (the transparent electrode layer).
